Hi

The problem is I have unfortunately deleted the virtual IIS directory on the Exchange 2003 Backend Server.

Recreate the IIS virtual directory with information from Frontend Server, everything work with OWA again, except the error 404 when a : is in the subject line. Because of reply and forward the outlook client makes often an RE: and FW: in front of the subject line.

That's my problem!

Looking for reinstalling OWA 2003, but seems not possible in Exchange 2003, you must reinstall the hole Server! and that's not a good idea

Greetings Jürg Schori
