> stay and so are Pop3 collectors – especially for the SOHO market.

The fact that it's included doesn't make it a good thing to use when you have other options. Even the most zealous SBS folks I know will say they'd use it only in the interim between switching people over to Exchange & hosting their own mail. As I said, YMMV....I avoid these things. They cause problems. Lurk in the SBS groups if you doubt that.
