Is there any way you can choose a different box to do this on and then swing the Exchange over? It's better to do this, but not vital.

The Deployment guide (www.microsoft.com/exchange/library) gives you a good starting point and there are other papers aimed at upgrading for you to read. There are no showstopping gotcha's really, so long as you make sure you have the pre-req's met, such as removing the Chat and IM services etc.
