Thanks Leif maybe I should rephrase the question....

How can I stop non authenticated smtp access to the sever. I want clients accessing over pop to authenticate when they send email no anonymous access. Does that make better sense.

Thanks again

Leif Pedersen [MVP] wrote:

Hi,

You configure this on the client (by default the SMTP virtual server is configured to allow relay from authenticated users so no need to configure anything on the server)

Hi all

I am having a little trouble setting my E2K3 to get the user provides a username & password to send mail when they are connecting to the server over pop/smtp connection when they are away from the building, internally we use direct exchange connection.

I have tried to setup what I thought was the correct settings in the smtp virtual server but then Exchange stopped receiving mail from the internet and local clients get a fail message when attempting to

Re: SMTP using usernames & passwords.

connect with outlook "Exchange server is not available"

Could someone please point me in the direction to set this up.

Thanks in advance.
