Hi,

I've created such a certificate, but now my Nokia E70 complains that the certificate is untrusted when syncing with Exch 2007. Without the Subject Alternative Name this issue doesn't occur.

Franc.

Found a much better solution here

<http://technet.microsoft.com/en-us/library/aa997633.aspx>

... you must install a valid Secure Sockets Layer (SSL) certificate on the Client Access server that includes both the common name (for example, mail.contoso.com) and a Subject Alternative Name for autodiscover.contoso.com. ...

PL

Hello,

thanks for your answers. I tried to add an external URL to the

autodiscover

site (is thos the right way or must I add a complete new site?). I have trouble with the PL syntax. Can anybody help me? I have problem eith the identity switch. Must I enter the URL or the Website IIS name?

I think I get with an inernal / external URL or a complete website

problems

with SSL and certificates?! Waht ist the best way to resolve this issue? A

Re: EX2007 Certificate Problem

seperate Client access server for external access?

Jens

When I open Outlook 2007 I get a certificate security warning
because the
name doesn't match. I use an external certificate. What
makes Outlook
here? Searching the OAB?

How can I resolve this wit internal and external access?

Jens
