Hello,

I want to implement exchange 2007 .

In Microsofts information i found that the edge transport server role cannot installed on the same server as the other roles, and that i need a second server.

The edge role is handling anti-spam and virus, does this mean that when i do a standard install of Exch2007, that i not have anti spam functions?

Can i install Exch2007 on a W2003 member server (no AD), if i have another server funtioning as Domain controller?.

Tx,

.
