Jeff,

Thanks for the feedback. If you check the setup.log it does state that ASP.net 1.1 was not enabled so glad to hear you are running now.

The problem is fixed. I thought I had ASP.NET 1.1 covered since I had version 2.0 and 3.0 installed. After I installed ASP.NET 1.1 I uninstalled exchange and reinstalled it. It seems to be ok now.

thanks,

I have exchange 2003 running on one server.
I've setup exchange 2003

Re: Setting up second Exchange 2003, no services showing

on
another server at a remote location, but on
the same domain. The
remote
location has a DC there also. I installed
exchange and everything
went
well. However, I see the folders and files
that were installed, but
I
don't
see any services listed to start exchange. The
only thing I see in
the
exchange management tool. So I re-installed
it again and it showed
that
exchange and management tool were already
installed, but it let me
install
them again. I did, but still no services and
the server doesn't show
up
in
the management tool? Any idea what is
happening?
