Hi,

The router must be configured to forward port 25 to the exchange server – is that configuration made?

Leif

Hi, we setup a new Windows 2003 Server / Exchange Server 2003 and are unable to telnet into port 25 from outside of our network. We made sure there were no firewalls being used (ISA, Windows Firewall and etc). We also talked to our ISP and they said they are not blocking port 25 traffic. They also said the router they installed, which they won't give us access too, is not set to block any port 25 traffic. Any ideas here? We need to get this to work so people can use Outlook Express from outside of the network to send e-mails using this server. Thanks in advance.
