Ace

yes, I was cleaning up the ADUC and I moved some exchange service accounts (I can't remember which ones at the moment) from the users container to a container called service accounts. Exchange then dies with a permissions error.

I found an article about that happening when you move them so I moved them back and all has been fine since. Wierd huh?

Also, I am trying to modify the list for the Lan users, not the OWA users. I would imagine that would make a difference?
