We recently began receiving the following error when replying to certain emails. This is an Exchange 2003/Outlook 2003 environment, with Outlook configured as an Exchange Server Account. The only thing I can think of is that we do have 2 different external IP's emails may go out through but they both resolve to mail.company.com.

The following recipient(s) could not be reached:

user@xxxxxx on 1/10/2007 3:22 PM

You do not have permission to send to this recipient. For assistance, contact your system administrator.

<mail.mycompany.com #5.7.1 smtp;550 5.7.1 <user@xxxxxx>...
Relaying denied. Proper authentication required.>

Thanks – Sean
