I am running OWA 5.5 with ISS5 on a Win2K box...

After the first login prompt, (username, password) i get the OWA login page where I type in my mail box so on and so on. But i have recently discovered that with any login and password I enter, I can access anyone's Exchange mail box. This is very upsetting, Please tell me that I'm doing something wrong, so I can fix it. If OWA allows this then I must remove it from my sever ASAP.

Thank you for your help...
