I have a single E2K server organization that started with an Exchange 5.5 server in mixed mode. The button in my System Manager to change to native mode is grayed out even though all connector and SRS and ADC agreements are long gone with the 5.5 box. I've found lists of precedents that need to be met to switch to native mode and all of them are done but the button continues grayed out.

I want to switch now to E2K3 on W2K3 by adding a new E2K3 machine to my organization but I'm hesitant to do that for fear the mixed mode from E2K will haunt me when I want native mode in E2K3.

Any thoughts on how to get to native mode now before the switch or will it be possible to migrate from E2K in mixed mode to E2K3 in native mode switching later?
