Hi,

This should help: <http://support.microsoft.com/?id=281926>

We are having an issue with our exchange 2003/sp2 application. We have one co-worker that is parttime. He asked that we forward all email sent to our local domain to his other business account, which we are trying to do. This is the issue: #5.5.0 smtp;550 Relay not permitted.

We set his local account to forward all email to his other email address and get a #5.5.0 smtp;550 Relay not permitted each time we send an email to the local account.

We are running SBS 2003/SP1. We did just reload the server. Is there something I did not configure correctly? I have been to DNSReport and have found that we are running perfectly. Also, we are not listed as a spam domain, I checked that also.

Please help.
