Hi Mike,

Following is a link to an article that contains a pretty good disucssion of what happens to 5.5 DL's when ADC replicates them to AD when the DL's are used for permissions on public folders. The long and short of it is that in Windows 200x only Universal Security Groups (USG's) can be used for permissions on public folders and USG's can only exist in native mode domains.

274046 You Cannot Add a Distribution Group to Permissions of a Public Folder in

<http://support.microsoft.com/?id=274046>

Craig
