I have created a CursorAdapter to insert and update multiple records in a SQL table.A

After updating/inserting multiple records or so, i need to be able to roll this action back.

At the moment, if i issue a TABLEUPDATE(.T.), then all the changes are committed, even if i use a TRANSACTION in the SQL (by issuig BEGIN TRANSACTION and ROLLBACK in SQLEXEC for the same connection handle stored in the CursorAdatper).

How can i rollback the changes after having issued a TABLEUPDATE(.T.)?
