Hi Lee,

Thanks for the links. I'm hitting the issue described in 253886. I don't quite understand the workaround.

Create a stored procedure that returns the data stored in SQL Server in a converted format with millisecond precision removed. For example:(convert(datetime,convert(char,getdate())))

How does this work with remote view? Does it mean that the remote view will call this stored procedure?But how?

Thanks,

Peter

Hi Peter:

I don't know what might be causing this. However, I am sending you several articles that mention this error in hopes that they may shed some light on this problem.

253886 An ODBC error may occur when you update the DateTime data in Microsoft SQL Server 7.0 or later versions and in Visual FoxPro

Hi,

I'm getting a update conflict in VFP8 SP1 when I update one particular
field

of a record in a particular SQL SERVER 2000 table thru remote view.

1. I'm sure that no one is updating that record.
2. I have traced in both VFP and SQL Server Profiler and don't see any updating before my update.
3. It does not happen to every record. For example, if I duplicate a record (except the primary key) which has the update conflict issue, the

new

record does not get update conflict.

The SQL Server is running on Compaq Proliant with Raid (probably Raid 5).

RE: Update Conflict

Can it be caused by hardware?
