Some projects do have project classes. However if I just create a simple hello world type prg and compile it I still get the error.

I uninstalled and reinstalled VFP9 and SP1 and still get the problem.

This is happening on my desktop (XP Pro SP2). I also have VFP9 on an old, little used WIN2K laptop. I copied a project over to the laptop and compiled and it worked fine...which leads me to believe it is not a project problem. Feels like a trashed dll problem or something similar.

I think I will have to go through the VFP9 folder and compare files between the desktop and laptop. I hope it is not something in any windows folders.

Any other suggestions appreciated.

Thanks,  
Cat

Sounds vaguely familiar... Do you have any project classes? (like something to add in manifests or something)

Yes I have.

The project builds fine. The application builds fine. But when it gets to "building executable" on the statusbar I get the file is not open error. After exiting the error message, I find that it has created an exe about 43KB. The normal exe is about 4.8MB. If I run the exe, I get a file open

Re: Compile – file is not open error

dialog looking for a type of fxp.

It's not just this project, I get the same error trying to build an exe for all my VFP9 projects.

I have an old VFP5 project that builds the exe just fine.

I guess my next step is uninstalling and reinstalling VFP9 and SP1.

Thanks,  
Cat

have you tried "recompile all"?

VFP9 SP1

At the end of a compile to an exe I am getting a "file is not open" error.  
The last compile I did was a month ago and everything worked fine.  
Today  
I  
am getting the file is not open error when trying to compile all of my vfp9 apps. The only reference I could find to this is something that happened in VFP6 and was fixed by a service pack.

Help please...  
Cat
