-

I am having an issue with a select statement as follows:

When I run the query a field is being created that is too small to hold the data. I have tested and the following is an example of the select statement.

```
SELECT glacnt_a AS gl_account,;
IIF(credit,0.00,glamnt) AS debit,;
IIF(credit,glamnt,0.00) AS credit,;
(fybgbal + ytddr + ptcdr - ytder - ptddr) AS balance,;
FROM &sgcpjdbf.\&rept1;
ORDER BY view_order;
INTO TABLE &sgcpjdbf.\&moutput
```

the fields debit & credit depending on the first record encountered is (N 8.0) or (N 4.2).

Is there any way i can define the size in the select statement?

Thanks for any help
Kevin
