Hi all,

I had posted this question earlier, its been 2 hrs and my post has not yet appeared in the list; so I am posting it again!

I want to process the query results, row-by-row and then display them. I have used cursors before with SQL server, how can I use cursors in foxpro? I have searched the help files; but could not find what I am looking for!

I want to use

```
SELECT fld1,fld2....FROM table1, table2 WHERE <condition> INTO CURSOR <cursor_name>  
then, OPEN CURSOR and then process the results row-by-row  
but, there is no OPEN CURSOR command in foxpro!
```

Can anybody guide me how to go about this?

Regards.

kd
