Have you set a buffering level 3 or 5 for the view. using CursorSetProp()  
With 3, row buffering, the update occurs whenb you move off the row in the  
view. With table buffering, 5, you need to call Tableupdate(1,, ) to send  
all updates.

Have you tried a SPT (SQLPassThrough) call  
h=CursorgetProp('Connecthandle', 'myview' )  
myvar= '1234'

s= SQLEXEC(h, [UPDATE tablename SET column = ?myvar ] )

If s=1 and REQUERY('myview') makes the view display the updated value , then  
the connection and driver are working as expected and the problem would more  
likely be in some setting for the view.
