MDB is an MS Access database.

You can use that data directly via ODBC or OLEDB, or you can export it to a native Foxpro format.

Your easiest entry point will likely be a remote view from VFP into your Access database. There is a TON of information in the help file about using remote views.

It's not necessarily your best option for long-term use, or maybe it is, but you can get there from here.

The information is there for your taking. Feel free to come back when you try something that doesn't work. We'll help!

to Dan Freeman,
Sorry for that, we have an existing program running in our company and that was coded in visual basic, the filename of that file is "Log.mdb" and i want it to access in visual foxpro any idea on how to access it...

thanks...

You'll have to put some effort into asking a better question, I'm afraid.

Hi expert,

can you give me some idea how to access a table like the
Visual Basic
table

thanks....
