I'm using eFax to programatically send faxes and it normally works great. However, we are moving to a new server that uses a proxy server. When I test the program on the new server, I get this error message:

OLE IDispatch exception code 0 from System: The remote server returned an error: (407) Proxy Authentication Required...

The eFax people are no help – they just say to contact my network person. However, the network person says that I need to talk with the eFax people.

Any suggestions?
