I've developed several using ASP but now prefer ASP.NET 2.0 which provides a Membership, Roles and Profiles system that integrates with the database which a stored procedure builds for us. Setting up the login page is something like 6 clicks. Learning to do it all takes a month or two.

Hello,

I cannot find any documentation for creating a web portal for my customers.

I want a simple login page with username and password.

Based on their username, they should be directed to a "Portal" page which gives them access to their own specific reports for download or online viewing.

Any thoughts?

Thanks

Dave Basile
