Gee, Nicholas. I didn't realize you were such a sensitive guy.

But, since you felt the need to respond in a non-factual manner, even though you are not "not hurt by my words"....

Perhaps my "Shame, shame, etc.." didn't come off that well in print, but in person, most developers would have taken it as a light-hearted admonishment to always check the data before operating on it – That's like a programming 101 course.

1. > why you would want... adopt a position of passing, publicly, a verdict on someone else's coding acumen or insight.

Because your flawed acumen & insight were posted publicly.

2. > About your incredulous response to my advice to Richard

I have no idea how you can characterize my comments as "incredulous". As I said, checking the data is a 101 course, regardless of whether or not it was "it was the early days of ASP". I'm fairly certain the concept existed way back yonder in the COBOL days.

3. > First, as regards Microsoft's methods of encouraging web architects to adopt their languages and proprietary software solutions

Your contention was that ASP is some evil scheme to entice developers to use FP's admittedly lame auto-magically generated crap code is so far off-base, it makes you look like a tinfoil hat-wearing paranoid. That is what I addressed. I even agreed with you here....

YOU: >> but I am not a big fan of any FP included solution

ME: Not that I disagree, but.....

I simply disagreed with the drivel that followed.

4. > Even if you allowed an unmonitored FTP upload to your server

Please note that the OP is using a file upload method for putting files on the server. Not anonymous FTP.

5. > When I was stricken with 500 Gb blah, blah, blah.....

> I had, of course, strict limits on size and type of file I'd allow to

Re: About FP, folder permissions, and sysops...

come in.

Yeah, obviously. So how did the 500 Gb file make it to your server then?

6. > But none of this is the point, Bob. I have no interest in educating (or chastizing) you.

Oh, yeah – That comes through loud and clear.
