Hi Kathleen

I think I follow that – when you refer to the root of the web – could that mean the >HTM page or at least the code page that supports the htm page?

Thank you for taking a look at my question
Joyce

Joyce:

If your pictures are stored in your images folder, and the page with the script is in the root of your web, then the references to the images would be:

```
myimages[1]="images/image1.gif"
```

Hi Kathleen

I have taken a look at the second Javascript you directed me to. This looks like it can handle the number I need and I think I understand a bit more about modifying it. I can follow the first part of the modification: replacing the existing picture file names with my own ones. My images however are not stored on other peoples websites, they are stored somewhere inside my website! – how do tell the script to find them in my image folders?

"Kathleen Anderson [MVP – FrontPage]" wrote:

You can do that with JavaScript:

Random Image Rotator

<http://javascript.internet.com/image-effects/rotating-image.html>

Random Images with Links – a script that loads a random image with corresponding link. You can throw in as many images into rotation as you wish. <http://www.javascriptkit.com/script/cut144.shtml>

Thanks for all your feedback Bob.
You have helped understand much more about the issues and my own shortcomings.
But... I still need some help
Can you point me in the direction of a product that allows me to cycle pictures like the FP Banner web component but will be visible to users of the latest MS software? (the consensus of opinion garnered from this site appears to be Java script can be used successfully)
As I have zero ability/experience writing code I need a product that works on the same principles as FP – i.e fill in the

Re: image gallery

boxes and click apply or
better still the insert command!

Thank you for taking a look at my question

is
not
secure
as
it
uses
Java

Being in Java doesn't
usually / necessarily mean
insecure. The
biggest
problem is that MS
operating no longer include
Java by default,
meaning
that
the typical user will not
have Java installed, and
therefore will not
be
able to see Java based items.

Javascript,
is
this
the
same
stuff
that
has
been
used
to
put
together

the FP Banner web
component?

No.

Re: image gallery

Finally

–

as

a

naive

IT

person

If you're naive, you are not
an IT person.

I

am

surprised

that

a

feature

so

simple

as

cycling

through

a

number

of

pictures

If it's so simple, why have
you not written your own?
Why is it, that
whenever someone
proclaims that something is
simple, they don't know
how
to
implement the simple thing
themselves?

what

went

wrong

and

why

have

microsoft

not

Re: image gallery

solved
the
problem
of
security

The supposed "security
problem" is not a MS
problem. Sun is in control
of
java.

which
has
resulted
in
new
computers
not
being
able
to
see
it
anymore?

See above. Java is no longer
installed by default on MS
operating
systems.

You are certainly free to go
and download & install Java
yourself.

Also,

it
is not available any more,
not because of security
concerns, but

because

MS

wants to use an extended
version of Java which
infringes on Sun's
patent.

Using FP
2002 with
Xp prof.
1. Have
recently
learnt that
the FP web
component
called
"banner" is
not
secure as it
uses Java,
further
many new
computers
are shipped
without
ability to
view this
FP feature.
2. I have
been refered
to a site
called
dynamicdrive.com
to get hold
of

plug

ins that
offer the
same
functionality
as the
"banner"
feature.
My issues
are
1. dynamic
drive.com
offers a
large choice
of plug ins,

Re: image gallery

however
they
all
seem to use
Javascript,
is this the
same stuff
that has
been used to
put
together the
FP Banner
web
component?
Could you
give me a
little
info
on

what

looks like a
good java
and bad
java
situation
2. the plug
ins on the
dynamic
drive site
come with
pictures
from
the

author

of the plug
in,
obviously i
need to
change
these to my
pictures.
they
tell

me

Re: image gallery

I need no
code
writing
knowledge
to utilise
these plug
ins, but I
cannot

even

begin to
understand
how to
change the
pictures
over. Can
you advise
an

online

site that I
can visit to
understand
how to do
this?
3. Finally –
as a naive
IT person I
am
surprised
that a
feature so
simple

as

cycling
through a
number of
pictures
seems so
difficult to
achieve.
The
FP
banner
feature was
so simple to
use... what

Re: image gallery

went wrong
and why
have

microsoft

not solved
the problem
of security
which has
resulted in
new
computers
not
being able
to see it
anymore?
Or have
they fixed it
and i can
get
the
FP
banner
feature back
in some
other shape
or form?

Thanks for
taking a
look at my
questions

Dave
