Steve,

Did you tried in the custom query changing all the ""  
with [ ]

Also try using table and field names without '-' eg: fiel-name (use  
fieldname )

binu

---

| JohnP,

|

| It sounds menial but have you checked with your Hosting Service to  
| ensure they support Access Databases and the Access Web View portion of  
| Access Databases? I know one of the Hosting Services I use currently  
| states

| they support Access DB's but don't support the Access Web View portion  
| (which thoroughly pisses me off and is the main reason I am dumping them  
| come re-up time). So in short...check with your provider to ensure they  
| are

| capable of supporting what you are trying to do.

|

| Good Luck,

| Carl

| > I have had the same troubles as others I have read in this discussion  
| group. Started off by importing an access 2003 database into Front Page  
| 2003. Created a new page and saved it as an .asp. Ran the database  
| results

| wizard, used the correct database connection, tried to use an existing  
| access query (View), and got "database results wizard failed. Contact  
| your....." error. Then, after reading some posts on this board, changed

| the fpclass file "debug=false" to "true. Also tried establishing defaults  
| for all fields in the wizard but, the wizard won't let me select defaults  
so  
| I added a default to all fields directly in Access. After that, I got  
| "syntax error". Read another post and tried to create a custom query  
| instead of an existing access query. Still the same error. HELP !!!  
|  
|  
|
