go to where you registered them and go into the "forwarding" section.
just forward each domain to it's particular target page.
If you can't do this just make a folder for each within your site like:
yoursite.com/domain1 and yoursite.com/domain2
in each of these folders you'll put an index page that automatically forward
the visitor to the page you want them on.
you can use a meta refresh or if you know the server side scripting
available someone will tell you how to do a redirect using this language.

> I own 3 domains and only host 1 website. I have all 3 domain names
pointing to my one website. I would like 2 of the 3 domain names to be
redirected to 2 specific pages within my website. I know this can be
accomplished, but I am unable to find the directions to accomplish this.
Can anyone assist?
