Whenever the doctor tells me to cough...I runaway quick!

Here's the actual error mssg:

=====>

The page cannot be displayed

There is a problem with the page you are trying to reach and it cannot be displayed.

---

Please try the following:

Click the Refresh button, or try again later.

Open the [www.syossetrules.com](http://www.syossetrules.com) home page, and then look for links to the information you want.

HTTP 500.100 – Internal Server Error – ASP error

Internet Information Services

---

And that is in verbose error message mode.

Thanks.

Robo

| Hi Rob,

|

| File System permissions are granted on a user account basis. In other words,  
| the right kind of file system permissions need to be set for the right user  
| account. In your case, the user account may be IUSER\_<machine name>, or it  
| may be some user account that your COM class is impersonating. I don't know  
| which. You would have to talk with your hosting service about that.

|

| If you copy and paste the error message instead of describing it, that would  
| be extremely helpful.

|

| Remember that when your doctor tells you to cough, he can't help you much if  
| you only clear your throat.

| The host calls it Basic Write Permissions. The upload system should write  
| (for to upload image files, etc) to the "uploads" folder. Using Persits ASP  
| upload.

| The exact error is not very exact..no matter how I set Show Friendly HTTP  
| errors (checked OR unchecked) it gives me the same vague info.. Page Not  
| Found, HTTP: 500.100 Error... something to that effect.

| It's an upload system within a forum software package....I have it working  
| fine in another subweb on the same domain.

| At first I was thinking that I had the path to the uploads folder incorrect  
| (and it still may be incorrect) but someone said that I may not have the  
| write permission on the folder.

| Shouldn't creating a folder within a subweb that has write permissions set  
| on everything also become a writeable folder? Thats the main quesiton here  
| (for me at least). If it doesn't I just need to contact my host.

| ThANks..

| | The phrase "Read/Write permissions" is not specific enough to give you an  
| | answer. What kind of permissions did you assign? File System or Web  
| Server?

| | To whom did you grant them?

| | Also, please post the exact error message you received.

| | Also, please explain your use of the term "upload" which is entirely too  
| | generic to identify the method you used to "upload". Describe the steps  
| you  
| took.

|| Howdy all...question regarding inherited (or not) permissions.  
||  
|| 1- created subweb with Read/Write Permissions on entire subweb.  
||  
|| 2- uploaded subweb from local to online - everything works except  
|| uploading  
|| feature (I get 500.100 error - page not found I think).  
||  
|| 3- then created a new folder called "uploads" through FP at:  
|| /subwebname/forum/uploads  
||  
|| shouldn't the upload folder inherit the read/write permissions,,,or no?
