DW6000 has been causing problems for FrontPage users for over 9 months now, you are the first to say they can publish at all! In February a DW user said that DW6000Pro is needed for anything other than web browsing and email.

What authorisation system is being used on the servers? NTLM authorisation (on Win2003 server?) may be being blocked by Directway, whereas Basic authorisation (on your Win2000 server?) may (now) be getting through.

Ron
