another problem that happens with using Publisher...if anything overlaps in the Publisher design...it will convert it to a graphic image when you save it as html.

In the long run you'll save a lot of time by *not* using Publisher to create html pages.

| Chris: let me explain what I am trying to do here: I simply could not put
| my cursor outside my 2 textboxes, with mouse click or key stroke. The
| cursor always stays inside the textboxes. That way I could not add any
| object outside the boxes.

| By the way, the original web files was created with MS-Publisher and
| converted into .htm file. I am using FrontPage to do some enhancement ...
