Hi donmeanie,

Add a sound

In Page view, at the bottom of the document window, click Design .
Right-click the page, and then click Page Properties on the shortcut menu.
On the General tab, under Background sound, locate and click the sound file you want, and then click Open.

Important Some sound file formats, such as .mp3 files, are not displayed in the dialog box. For these files, you must manually type the path of the sound file in the dialog box. For example, if a file that is named Song.mp3 is stored in a folder that is named Music, this is how the path looks: Music/Song.mp3. If the file is located in the root, this is how the the path looks: Song.mp3

Do one of the following:

To play the sound continuously, select the Forever check box.

To play the sound a fixed number of times, clear the Forever check box, and then select or type the number of times you want the sound to play in the Loop box.

To save and preview the page, on the File menu, click Save.

Make sure that your speakers are working, and then click Preview in Browser on the File menu.

Notes

The larger the size of the file, the longer it takes to load the page.
This feature is not supported by all Web browsers.

Please let me know has this helped You...

Thank you...

Raghu...
