Thanks

For someone to open my site for author in FP they would have to know my server password wouldn't they?

Best wishes

Paul M

>-----Original Message-----

>Yes, it means no one can download your database from the fpdb folder, however if someone can

>actually open you site for author in FP, then they have access to your database, but if the database

>is stored outside of the web root, then the database would still be secure.

>

>I don't use the FP database components, so I can't comment on that content, but the FP will set the

>correct permissions, and if you need specific page or folder permissions, that would be something

>that you host would have to set, as you can not set them from within FP. With Access on the database

>is used on the server, not the actual Access application, so setting in Access do not apply.
