Only if you are using a database (to store the # sequence) and some server side coding like ASP or PHP
– best you could do w/o above is a date/time stamp as the #

| Hi,

| Re: FP 2002.

| I designed and manage a website for a local courier company.

| They have asked me to include a form on their website where customers can
| book a collection and provide details of packages that need to be collected
| (collection times, weights, number of packages, collection address, etc...).

| Developing the basic form is no problem but I'd like to know if it is
| possible to automatically insert a sequential number into the form each time
| the form is used?

| Thanks in advance,

| Sonars_UK
