I have been using FP2003 to upload material to my website for the past month, but today I keep getting error messages when I try to upload. I have verified that the FP extensions are installed through my websites Control Panel.

The error messages FP2003 gives are:

Unable to open '<http://www.californiavarmintcallers.com>'. Possible causes:

1. The webserver may not have the FR Server Extensions Installed.
2. The web server may be temporarily out of service.
3. If you are connecting through a proxy server, the proxy settings may be incorrect.
4. An error may have occurred in the web server.

I've not changed any setting on my computer, so I am at a loss here as to what is going on. The website is still up and running, I just can't upload files to it.

Any suggestions?
