I have a serie of websites all contain a certain format with pictures and a lot of text as where the text is on every website at the same place (in Cells of a table). Now just like in Excel (the sort function) I want to be able to sort on, in example price of distance or color or what ever. I think the only way to do this is to work with a database (My SQL????).

I am looking for an URL on how to do this. Should be for dummies as I consider myself dummy in the field of databases. Any support on the issue is highly appreciated.
