Would you mind (I know it's a long shot) turning off the pop-up blocker of zone alarm and see if that makes a difference?

Also, when I purposely provide a bad password 3 times in a row, I get an error message that is somewhat different from what you get -- mine does not give the reason for not being allowed access as being: "your Web browser is sending a WWW-Authenticate header field that the Web server is not configured to accept."

I just get: "You do not have permission to view this directory or page using the credentials that you supplied" -- no reason supplied.

Perhaps someone can comment on the meaning of: "your Web browser is sending a WWW-Authenticate header field that the Web server is not configured to accept."
?

Thanks
