What are you using for a URL for your local host

Try opening your root web under IIS in FP using <http://localhost/>

| Well, that seems to work:

```
| <!-- _vti_inf.html version 0.100>  
| <!--
```

```
| This file contains important information used by the FrontPage client  
| (the FrontPage Explorer and FrontPage Editor) to communicate with the  
| FrontPage server extensions installed on this web server.
```

```
| The values below are automatically set by FrontPage at installation.  
| Normally, you do not need to modify these values, but in case  
| you do, the parameters are as follows:
```

```
| 'FPShtmlScriptUrl', 'FPAuthorScriptUrl', and 'FPAdminScriptUrl' specify  
| the relative urls for the scripts that FrontPage uses for remote  
| authoring. These values should not be changed.
```

```
| 'FPVersion' identifies the version of the FrontPage Server Extensions  
| installed, and should not be changed.
```

```
--><!-- FrontPage Configuration Information  
| FPVersion="4.0.2.7802"  
| FPShtmlScriptUrl="_vti_bin/shtml.dll/_vti_rpc"  
| FPAuthorScriptUrl="_vti_bin/_vti_aut/author.dll"  
| FPAdminScriptUrl="_vti_bin/_vti_adm/admin.dll"  
-->
```

```
| So I should be able to connect with FrontPage then?
```

```
| One thing was that when it was installing the extensions, it was asking  
| about a user or group that would have access. We only have an administrator  
| at this point, so that is what was selected. So, does that mean that I use  
| the administrators credentials for access?
```

```
| Sorry for such junior league questions.
```
