Hi Eleanor

These pages are actually for a help file which is composed of compiled HTML pages. The client wants to view the pages in full screen (1024x768) and view pages one after the other without any of the elements "moving". He wants navigation links at the bottom of each screen to the next page and to the home page.

I can set the length of a cell, but it expands if there is too much content, so I have to cut and paste to see the proper amount of content for each page. Also, some fonts are different sizes, which seems to throw the length setting off.
