Hello!

I have successfully configured a submission and query page in FP to a SQL server using aspx pages. However, I would like the query page to be able to accept a parameter from the user. For instance, I would like the user to query the database using a "Ticket ID". I have tried dropping a text box with a [Submit] button, but I get yelled at by FrontPage saying the text box will not work with aspx pages. Knowing that I want to keep the asp.NET pages, how do I allow the user to query given a criteria? I look forward to your assistance!

Geoff
