Actually, you are right. FPSE2002 is using NT\_AUTHORITY\SYSTEM account to access the UNC share. Since the system is a local computer account, it is unable to access the files on the UNC share and hence the error. Is there any way of getting around it?

Amol.

You have no doubt looked at the logon failures logged on the hosts of the UNC's. Knowing FP ext I would not be too surprised to see it attempting access with the Local System account (yes, I know, you said IIS 6 with the app pool and others using domain accounts).
