Hi Larry,

Few things to check,

1. Is this only for ASPX pages? Are HTM and ASP pages working without issues?
2. Do a "Check Server Health" if you have FPSE installed [NOTE: This will reset permissions that would have been manually set on the NTFS partition].
3. Also check if the ASPNET account has read/list permissions on the content folders.
4. If these ASPX pages are accessing SQL or Exchange server, then the anonymous account needs to have permissions to access it.

Regards,
Vijay

|
| despite setting the "Anonymous access" in IIS as well as using the
| FrontPage
| browser based pages to set anonymous, I still can't seem to get my subweb
| to
| quit requiring user credentials to view the aspx page.
|
| I've also checked the that the file permissions are there for the IUSER
| account.
|
| Any ideas as to what I've missed that's keeping me from getting this thing
| working correctly?
|
