- 

Even though others may not recommend it, I always uninstall the FP 2000 SE before I install the FP 2002 SE  
Try starting fresh

In Control Panel – Add Remove Programs

- Uninstall the FP 2002 SE
- In Add/Remove Windows Components unselect IIS to remove it
- Restart your system

In Control Panel – Add Remove Programs

- In Add/Remove Windows Components select IIS and in details unselect the FP 2000 SE  
(also any services you won't be using in Win XP Pro (say FTP & SMTP))
- Restart your system

– Check that IIS is running in IIS MMC then close the snap in  
(Start – All Programs – Administrative Tools – IIS)

– Reinstall the FP 2002 SE from the download page and then restart  
version 5.0.2.2623 followed by version 5.0.2.4803 from

<http://msdn.microsoft.com/library/default.asp?url=/library/en-us/dnservext02/fpse2002win.asp>

– Open the IIS snap in again and under the root web right click to check All task to see if you need to  
Apply/Extend the FP SE

(under properties you should also now have a FP 2002 SE Tab and in Start – All Programs – Administrative  
Tools – you should have a  
SharePoint Admin option)

Test it by opening FP and your FP 2002 SE server based web using File Open site and entering  
<http://localhost/>

PS

You can publish your old disc based web to <http://localhost/> in FP and test the Discussion web there

– but you must publish that server extended web to an online hosted server w/ the FP SE for anyone else to  
use it

–

| Dear Stefan B Rusynko,

| 1) After installing Frontpage Server Extensions 2002, a window pops up  
| saying that "the saerver administrator and the server extensions on the web  
| server are not compatible." The administrator program is too old to old to  
| use with this server." For your info, the IIS installed in the administrator  
| tools is IIS V5.1.

| 2) Anyway I hit the ok button and the frontpage extensions installation was  
| complete. Under administrator tools --> I found a internet shortcut called  
| Microsoft Sharepoint Administrator and when I click it, this happens--->

| You are not authorized to view this page  
| You do not have permission to view this page using your current user account.  
| Please try the following:  
| â?¢ If you have another user account with a higher level of permission, click  
| your browser's Back button to try again using that account.  
| â?¢ If you believe you should be able to view this page, contact the Web site  
| administrator.

| Does this problem got anything to do with Anonymous Access and  
| Authentication control? I have set the user name as administrator/servername  
| and checked "Anonymous Access"and unchecked "Allow IIS to control password."  
| The computer is login to administrator account.

| I created the forum page using the Frontpage wizard with the discussion  
| template. It didn't include or create any database files for me. Could that  
| be another reason why I am facing this problems. Please kindly advice. Many  
| thanks.

| Regards,  
| Shay
