I forgot to mention:

- Server Extensions are 'Allowed'
- I also tried to 'Allow' all of those available
- I also restarted the server after each change
- Server roles: File, Application (NOT MAIL, I point to my Internet connection's SMTP server)

However, I do NOT believe that I have SharePoint installed (unless I chose by accident). Does this have to be installed?

I will also try to move my web. I've had bad luck when I have tried to move it out of the Default web.

Thanks in advance,
-Adam

Windows Server 2003 is a locked down environment, and, for websites, everything you use has to be enabled first.

On the server, open IIS MMC (Start->Administrative Tools->Internet Information Services (IIS) Manager) and expand the folder tree.

Open the folder Web Service Extensions, and ensure that FrontPage Server Extensions is allowed. If not, click on the item and click the Allow button. (You may have to click the Extended tag to see the Allow button.)

Close IIS MMC.

Start->Administrative Tools->Microsoft Sharepoint Administrator

The opening page gives a list of all websites on the server, check that your site is on the list, and it has either Extend or Administration link. If the link is Extend, then server extensions have not been installed - click Extend to install the extensions. If there is a version number for your web starting with 6.x, then you have a Sharepoint Services web, not a FrontPage Extensions web. Otherwise, click Administration.

On the next page, click Go to Administration for websitename, login if

Re: Server Extensions Administrator

necessary.

Scroll down to Server Health, and run Check Server Health, and allow all checks and repairs.

This should correct whatever is wrong. It is possible that opening the web as a disc based web has corrupted part of the extensions.

FYI, on Windows 2003, I never use the default web, always leaving it as set by Windows IIS installation, and create virtual servers for all my sites.

A rough guide to setting up the SMTP server and configuring extensions for SMTP can be found at www.rxs-enterprises.org/fp/b/smtp/

Note: where you see click on Virtual Servers -> Default web site Administration

click on your own website instead of the Default web site.

Ron,

I can't seem to post a new question, so I'll try a reply here.

- Win2003 Server w/ FP2003 and 2002 Extensions installed

- Email set up through administration appears to be set.. (correctly ??)

- 'thisweb' is set up as a virtual web under default web

- I do get the component error message in FP2003

I'm also getting this problem, and I can't get it to go away. I've always

opened as 'disc based', pointing to c:\web\thisweb. Your response indicates

that this is an incorrect way if I want to test my forms. For kicks

I tried

to open <http://machinename/thisweb>, but it failed as not found.

Am I just simply missing something obvious or is it something else?

Thanks in advance for any assistance.

-Adam

<http://www.example.com>

A disc based web is one you open in FrontPage using a file

Re: Server Extensions Administrator

system
location, such as e:\mywebs\webname.
This is still a disc based web even if it is used by the web
server
as
the source of the finished website.

You can build webs in FrontPage using either system, but for
testing
(or running the web) you must be using a server based web if
the
site
includes any FrontPage run time components, such as hit
counter,
guestbook, discussion web, custom linkbars, forms (that use
the
extensions as a form handler).
Also, any web that uses run-time components must either be
built/edited on a server (using the http:// address to open the
web
in
FrontPage) or published to the server using http publishing,
not
FTP.

You will have to configure the extensions for SMTP since
you have a
form in the web that sends data through email.

Thanks Tom, Ronx for the feed back

I normally play with dreamweaver, this PC
dont have it and the
site
was put
together in Frontpage. I am not fimilliar with
the whole set up,
when u say
disc based I am not sure, do i have to
configure the FP
extensions
for an
smtp or ???.

Re: Server Extensions Administrator

As I say i am not to fimilliar with front page
and I'm learning
as
i'm going

Thanks for assistance

"Ronx" wrote:

That text comes from the
file _derived/nortbots.htm.

nortbots.htm only appears in
four cases:

1) You are testing on a
disc-based website,
including a
FrontPage
disc-based web that is being
browsed through a
web-server.

2) You are testing on a
website that does not have
server
extensions
installed or running.

3) The site (or form page)
was FTPed from a
disc-based web, or
published using a FTP
address for the destination,
or published
to
a
file system destination
including a network share or
UNC address
(like
\\machinename\path\webname).
Publish must be to a URL of
the
form
<http://example.com>

4) There is a bug associated
with FrontPage98 which

Re: Server Extensions Administrator

causes this
problem.

Thanks,
different
interface
lets see if it
works.

The reason
being is that
i want to
use the
basic mail
function
in
the
form,right
click on
form and
send file
through to
email
address
and
so forth,
its just that
if i try on
this pc i get
the error
that my
extensions
are not
loaded but
will work
check this
out

Re: Server Extensions Administrator

###

FrontPage
Run-Time
Component
Page
You have
submitted a
form or
followed a
link to a
page that
requires
a web
server and
the
FrontPage
Server
Extensions
to function
properly.

This form
or other
FrontPage
component
will work
correctly if
you
publish
this web to
a web
server that
has the
FrontPage
Server
Extensions
installed.

####

thats the
message. I
want it to
work
locally,
please help
with
solution
Tom,
