Ron.

Here is the latest (I did this prior to seeing your post).

- I created a new Web same level as Default
- changed the port # (ex:8080) (dflt host, no IP# chg)
- set FP extensions
- launched FP2003
- opened <http://machine:8080>
- appeared to open fine
- tried to add email addr, got error about extensions not loaded.
- I tried various other combo's, no luck.

Now, after thinking about it, is there something in my FP2003 that I may need to set. I was trying to figure out why I'm getting the error in FP2003 prior to me even saving the page. I get the error (no server extensions) right after I set the form properties, which happens before I have set up a web in IIS.

What do you think?

"Ronx" wrote:

No.

What you are doing is creating a virtual directory. FrontPage extensions will not work (at least not in a straightforward manner) with virtual directories.

Either, Open the default web site in FrontPage, then create a subweb for your web, and import the files from c:\web\thisweb or better, open IIS MMC and create a new server, and choose C:\web\thisweb as the root directory. You will either have to use Host Headers for this web, or add a new IP address to the server, and use the new IP address. Then extend the web and configure the extensions.

I'm not at my machine at the moment, but... I did a rt click, on
the default
web site, new virtual directory. I would then point it to the same
directory
(c:\web\thisweb) that FP2003 points to. Is this what you mean by
in? If
so, any other thoughts?

Is there another way to create the subweb or do I actually need to
create it
from FP2003?

Thanks in advance,
–Adam

"Ronx" wrote:

No, sharepoint does not need to be installed.

One thought – if your web is in a Virtual folder then that
may be
why
the extensions do not work. The folder has to be *in* the
default
web
(as a subweb) for it to appear as a folder in the default web.
To avoid using a subweb set up a virtual server, not a virtual
folder.

I forgot to mention:
– Server Extensions are 'Allowed'
– I also tried to 'Allow' all of those available
– I also restarted the server after each
change
– Server roles: File, Application (NOT
MAIL, I point to my

Re: Server Extensions Administrator

Internet
connection's SMTP server)

However, I do NOT believe that I have
SharePoint installed
(unless I
chose
by accident). Does this have to be installed?

I will also try to move my web. I've had bad
luck when I have
tried
to move
it out of the Default web.

Thanks in advance,
-Adam

"Ronx" wrote:

Windows Server 2003 is a
locked down environment,
and, for
websites,
everything you use has to be
enabled first.
On the server, open IIS
MMC
(Start->Administrative
Tools->Internet
Information Services (IIS)
Manager) and expand the
folder tree.
Open the folder Web
Service Extensions, and
ensure that
FrontPage
Server Extensions is
allowed. If not, click on the
item and
click
the
Allow button. (You may
have to click the Extended
tag to see
the
Allow button.)
Close IIS MMC.

Start->Administrative

Re: Server Extensions Administrator

Tools->Microsoft
Sharepoint Administrator
The opening page gives a
list of all websites on the
server,
check
that your site is on the list,
and it has either Extend or
Administration link. If the
link is Extend, then server
extensions
have not been installed –
click Extend to install the
extensions.
If
there is a version number for
your web starting with 6.x,
then
you
have a Sharepoint Services
web, not a FrontPage
Extensions web.
Otherwise, click
Administration.
On the next page, click Go
to Administration for
websitename,
login
if
necessary.
Scroll down to Server
Health, and run Check
Server Health, and
allow
all checks and repairs.

This should correct
whatever is wrong. It is
possible that
opening
the web as a disc based web
has corrupted part of the
extensions.

FYI, on Windows 2003, I
never use the default web,
always
leaving
it
as set by Windows IIS
installation, and create

Re: Server Extensions Administrator

virtual servers
for
all
my sites.

A rough guide to setting up
the SMTP server and
configuring
extensions
for SMTP can be found at
www.rxs-enterprises.org/fp/b/smtp/
Note: where you see click
on Virtual Servers ->
Default web site
Administration
click on your own website
instead of the Default web
site.

question, so
I'll try a
reply here.
- Win2003
Server w/
FP2003 and
2002
Extensions
installed
- Email set
up through
administration
appears to
be set..
(correctly

Re: Server Extensions Administrator

??)

– 'thisweb'
is set up as
a virtual
web under
default web

– I do get
the
component
error
message in
FP2003

I'm also
getting this
problem,
and I can't
get it to go
away.

I've
always
opened as
'disc based',
pointing to
c:\web\thisweb.

Your
response
indicates
that this is
an incorrect
way if I
want to test
my forms.

For
kicks
I tried
to open
<http://machinename/thisweb>,
but it failed
as not
found.

Am I just
simply
missing
something
obvious or
is it
something
else?

Thanks in
