Thomas, When I try to open in FP my disk based web 'romet', as suggested I get: 'An error occurred accessing your windows SharePoint Service site files. Authors – if authoring against a Web server, please contact the Webmaster for this server's Web site. WebMasters –please see the server's application event log for more details'.

Thank you again for your prompt response.

"Thomas A. Rowe" wrote:

With your disk based site open in FP, go to File Menu | Publish Site and enter <http://localhost/romet> or <http://127.0.0.1/romet>

Change the name in IIS, does not update any references under Network Places.

Thomas, I did as instructed, I rename the web romet.us to romet in the IIS console, I am still getting the same error.

If I click on "Browse" on the "Remote Web Site Properties" screen to locate my web through my network places in the "New Publish Location Screen" where

Re: unable to publish to local IIS

now lists as "romet on my desktop" I am getting like berfore, the same error screen. "unable to open. . . etc."

Your help is very welcome

Thank you again

"Thomas A. Rowe" wrote:

Rename or recreate your subweb / subsite without the .us then you should be able to publish to it. Then thereafter you should just work directly in the server based web ([http://my\\_desktop/romet](http://my_desktop/romet)) and not the disk based web

I am unable to publish my web pages to my local IIS 5 INSTAL Through FrontPage.

If I type the URL [http://MY\\_DESKTOP/romet.us](http://MY_DESKTOP/romet.us) where "My\_Desktop" is the name of my computer and "romet.us" the name of my local web to my browser, I can locally access them. but then again I can't publish the Web changes to my web server through FrontPage like I was able to, I got a:

'unable to open '[http://my\\_desktop/romet.us](http://my_desktop/romet.us)'.  
Server Error: An error occurred accessing

Re: unable to publish to local IIS

your Windows SharePoint Services site files. Authors –if authoring against a Web server please contact the Webmaster for this server's Web site. WebMasters –please see the server's application event log for more details.

Possible causes:

1. The web server may not have the Front Server Extensions installed.
2. The server may be temporarily out of service.
3. If you are connecting through a proxy server, the proxy settings may be incorrect.
4. An error may have occurred in the web server.

If the server does not support the FrontPage Server Extensions, FrontPage may still be able to publish via FTP or WebDav. Please select one of this options and try again.

If I try to publish in WebDav I get the same error screen.

I checked the event viewer everthing looks clean. The system is running server extensions Version 4.0.2.8912

Any suggestions will be again appreciated.

Thank you in advance.
