C:\Inetpub\wwwroot\Romet and <http://localhost/romet> both point to the same exact location on your HD, the only different is the C:\Inetpub\wwwroot\Romet is opening the site as disk-based and <http://localhost/romet> as server-based. Since you have a server, then is better to open and work on the site as server-based.

You can always publish to a disk-based location as backup from the server location by, for example, publishing to c:\romet.

working off line and uploading has been the way of FrontPage and most web design programs, besides a backup is always a safeguard.

What puzzles me is why I can't do now what I was doing before, and what my son's laptop is steel doing now?

"Thomas A. Rowe" wrote:

You should never open this via this path, you should always open as <http://localhost/romet> and since this inetpub is the web server, you have no need to publish the site locally.

Thomas,
I
did
as
instructed,
I
rename
the
web
romet.us
to
romet
in
the
IIS
console,
I
am
still
getting
the
same
error.

If
I
click
on
"Browse"
on
the
"Remote
Web
Site
Properties"
screen
to
locate
my
web

Re: unable to publish to local IIS

through
my
network
places
in
the
"New
Publish
Location
Screen"
where
now
lists
as
"romet
on
my
desktop"
I
am
getting
like
berfore,
the
same
error
screen.
"unable
to
open.
. .
etc."

Your
help
is
very
welcome

Thank
you
again

Rename
or
recreate
your
subweb
/
subsite
without
the
.us
then
you
should
be
able
to
publish
to
it.
Then
thereafter
you
should
just
work
directly
in
the
server
based
web
(http://my_desktop/romet)
and
not
the
disk
based
web

installed.
2.

Re: unable to publish to local IIS

The server may be temporarily out of service.

3.

If you are connecting through a proxy server, the proxy settings may be incorrect.

4.

An error may have occurred in the web server.

If the server does not support the FrontPage Server Extensions, FrontPage may still be able to publish

Re: unable to publish to local IIS

via
FTP
or
WebDav.
Please
select
one
of
this
