Hi.

I recently upgrade my Intranet to W2003 with IIS6 and install the FPSE version 5.0.2.6790 everything was fine...

All the Subwebs was recreate fine, the permissions was fine and all the test to publishing Information using Office in the Webs was fine.

Now I Can't publishing information by any way...

I try to publish the information by Excel or Word and at the end of process appears a message, "Can not save the Document"

I'll try to repair the FPSE and the process end's fine, but the problem still there.

I'll try to check the server health and end' fine too, but the problem still there.

I made a new web site in the same server and configure the FPSE and it works fine even the publishing information in the Web by Office but in the Intranet Web does not.

help???
