Have you tried r-clicking on the form and choose "Options, and Update Database"?

>-----Original Message-----

>Hi Guys,

>

>I made a guest book with ASP page and MS access 2000. I

>can display data from the database via my asp page.

>However, when I try to make data entry into the database

>through ASP page, I got an error message " HTTP 500

>Internal server error".

>

>I have a write.asp page with a form that accepts data

>entry. The property of the form is like this:

>method="post" action="save.asp"

>

>The save.asp actually writes the data into database.

>

>However, everytime I tried to enter data in the form, the

>error message appears:

>HTTP 500 Internal Server Error

>There is a problem with the page you are trying to reach

>and it cannot be displayed.

>

>It seems that the save.asp page cannot be reached.

>

>I hosted it at my company's windows 2000 server.

>

>The same guestbook runs great here: [http://www.cn-](http://www.cn-knitwear.com/ocean/database/index.asp)

>knitwear.com/ocean/database/index.asp

>If you click "submit message", you will see the write.asp

>page.

microsoft.public.frontpage.programming: HTTP 500 Internal Server Error while running ASP page
