Make sure you have a FP Web / Site open, not just a page

| Hi ALL!

| My send button is not working. I create a confirmation
| page & fowllow the instruction below but still not work.
| The "Browse" button for URL of confirmation page is gray
| out. Please advise

| Thanks

| Instruction from Microsoft Fronpage is below

| Create a confirmation page and assign it to a form
| Rather than using the default confirmation page, you can
| create your own. First, create a new page in your web, and
| then set it as the confirmation page for your form.

| You can display the contents of form fields on your
| confirmation page. The site visitor can confirm that the
| information was entered correctly and, if necessary, can
| return to the form and fill it out again. You can also
| personalize the confirmation page; for example, if you
| request the site visitor's name in your form, you can
| display it on the confirmation page:

| Dear Jeff Smith,
| Thank you for taking the time to fill out this form.

| In Page view, click the New Page button .
| On the page, type the text you want to display after a
| site visitor has submitted the form.
| To display information back to the visitor from a form
| field:
| Place the cursor where you want to display the text. For
| example, you could display the contents of an e-mail

microsoft.public.frontpage.programming: Re: Confirmation page

address field, allowing the site visitor to confirm that it was typed correctly.

On the Insert menu, point to Component, and then click Confirmation Field.

In the Name of form field to confirm box, type the name of the field from which to display information, and then click OK.

The name of the field is displayed in brackets on the form. When the confirmation form is displayed to the site visitor, this field will display the site visitor's entry instead.

Repeat this step for each field you want to display.

Click Save .

Type the URL and the page title, and then click Save.

To assign the confirmation page to your form, open the page containing your form by double-clicking the file in the Folder List.

Right-click the form, and then click Form Properties on the shortcut menu.

Click Options, and then click the Confirmation Page tab.

In the URL of confirmation page box, type the name and location of the confirmation page you just created, or click Browse to locate it.

Tips

You can use the Confirmation Form page template to create a confirmation page.

To test your form, preview it in your Web browser by clicking Preview in Browser .
