- 

I've created a form and published it to my website but it doesn't work. My >host says that I have all FP extensions installed. I've read another post >regarding webs being published using FTP...this is what I use also. I tried >the suggestions in that post but it still doesn't work. I've seen comments >in the Help file about setting parameters in SMTPHOST or SendMailCommand but >don't find anything about how to do this. What am I missing here. The page >in question is at <http://www.wdsgfm.com/Submit%20Form.htm> ; All help is >appreciated. Steve

.
